

BD PROTOCOL

Build your coin community.
Earn ether dividends.

BD PROTOCOL V1.2

basecoin

Any existing cryptocurrency (including any ERC20 tokens but not limited to) can be considered as a basecoin.

dfocoin

Any basecoin can float their own dfocoin. Any individual or group of investor for a basecoin may do so following the BD protocol. dfocoin is non divisible like the equity of a company.

transaction loss

Each transaction of dfocoin will lead to 10% transaction loss.

airdrop gain

The 10% transaction loss happening is converted as airdrop gain and sold in exchange against Ether. This ether is rained as dividends into all the existing dfocoin accounts proportionate to the holding.

total supply

Total supply of the dfocoin is maintained constant as per the equation
transaction loss = airdrop gain

distribution of dfocoin

Initial distribution of dfocoin to the basecoin holders is done proportionate to the dollar investment spend by the basecoin holders to acquire the basecoin

monthly distribution

To promote exchange liquidity there will be a monthly distribution for those who provide dfocoin/ETH liquidity in exchanges

dfomainaccount

10% of all the issued dfocoin and all the airdrop gains will go to a single account which will be controlled by voting by the dfocoin holders.

BDPFO

The bd protocol itself will be floated as a dfo where 1% of all the dfocoins and 1% of all the airdrops from all the subsequent dfocoins will be coming into as revenue into the BDPFO

bdprotocolmainaccount

All the 1% proceeds from the airdrops and dfocoin releases will be held in the bdprotocolmainaccount

The entire spending of the bdprotocolmainaccount will be decided by the BDPFO

Mostly this will be spend as payments to build and market the BD protocol. Balance of funds may be distributed to the stakeholders of BDPFO.

The Problem Statements

BD PROTOCOL V1.2

Risk of coin Dump

If whale accounts holds more than 1% in any accounts in a basecoin

Lack of community

Basecoins need community ecosystems which can fuel and fund its growth.

Lack of investments

Lack of investments into building the ecosystem, marketing and development.

Lack of governance body

Lack of governance body to do the decision making to evolve the ecosystem

The Solution Proposal

BD PROTOCOL V1.2

BD protocol

Which enables the launch of a new dfocoin for any basecoin to build a decentralised organisation by the early adopters of any coin.

incentivise holding

by penalising transactions with **transaction loss**
by means of **airdropgains** to dfocoin holding accounts.

democratise distribution

Proportionate to the dollar investment spend to acquire the basecoin

The Solution Proposal

BD PROTOCOL V1.2

ecosystem funding

Made possible by the dfocoin holders voting to spend dfocoinmainaccount into amazing startups that will fuel the growth of the basecoin ecosystem.

marketing funding

by allocating part of the dfomainaccount to be spent by the dfo into marketing the basecoin

development funding

by allocating part of the dfomainaccount to be spent on development to improve the bd protocol as well as the basecoin codes.

Innovation

transaction loss = airdrop gain

10% of dfocoin is lost during any transaction of dfocin and this is sold in the exchange against ETHER and it rains into the dfcoin accounts as airdrop gains.

Similar to the equity of a company receiving dividend payouts.

Revenue model for the dfocoin

How the dfo will fund and fuel the ecosystem.

10% of all the airdrops and ETHER rain will come into the dfoaccount

10% of all the dfocoin distribution will be added to the dfoaccount.

dfoaccount will be controlled by voting by all the dfocoin holders. The dfoaccount can be used to spend on marketing, development, seed investments into other startups as decided by the dfo

All the unspent dfocoin balance will be sold in market and airdropped as ETHER rain to the dfocoin holders end of every 3 months.

Revenue model for BD protocol

How the protocol will
evolve

BD PROTOCOL V1.2

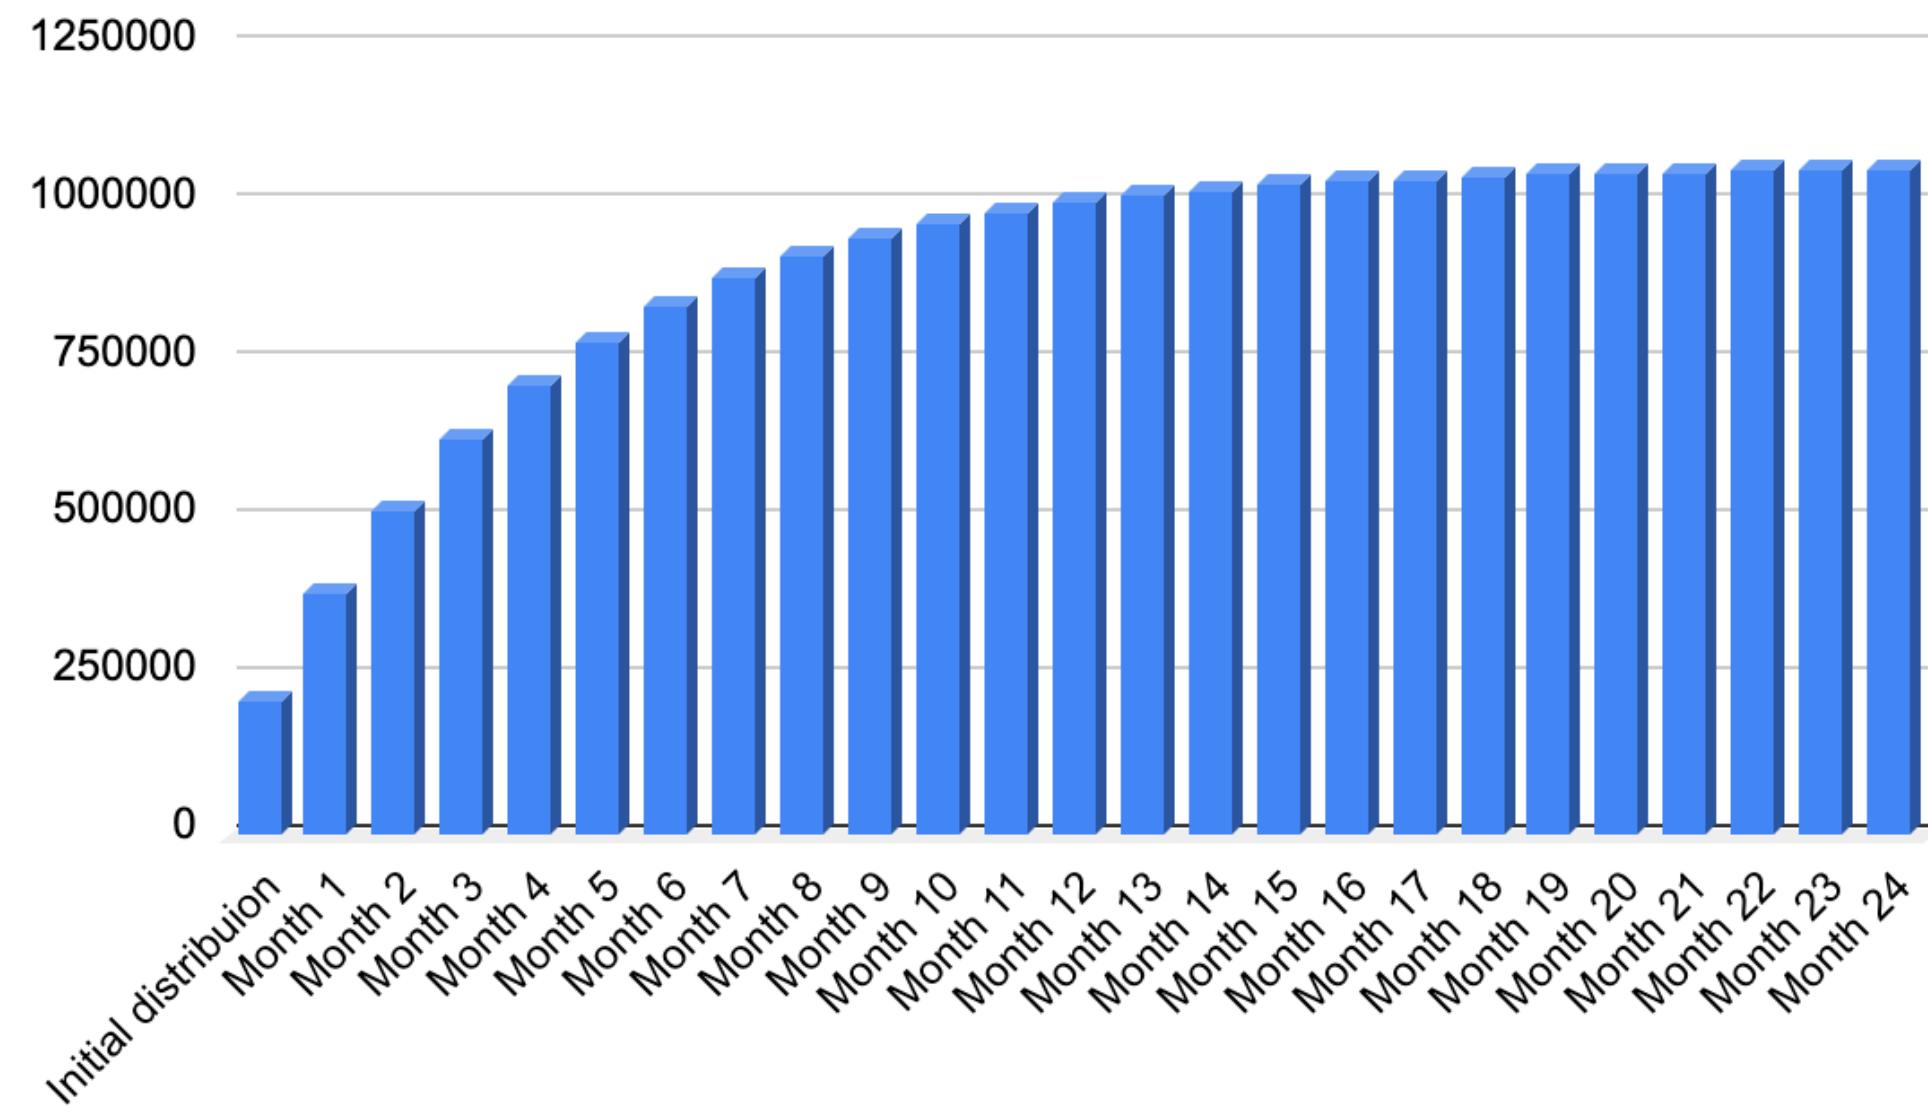

1% of all the dfocoins distribution will go to
the BD Protocol DFO account

1% of all the airdrop distribution will go to
the BD Protocol DFO account

BD protocol itself will be formed as a DFO
where the initial members contributing to
the development, deployment, marketing,
of the BD protocol will be distributing this
proceeds as decided by the BD protocol
DFO

dfocoins distribution curve

dfocoins supply distribution over time

coin distribution

To ensure a democratic
and healthy distribution

BD PROTOCOL V1.2

Initial distribution

20% of the dfocoin is distributed to the accounts of the basecoin holders at the time of dfocoin launch. The amount of dfocoin received in an account as part of the initial distribution will be directly proportionate to the amount of dollar spend as investment to procure the basecoin. None of the basecoin accounts will receive more than 1% of the initial distribution.

dfomainaccount

10% of the initial distribution is supplied to the dfomainaccount

coin distribution

To ensure a democratic
and healthy distribution

BD PROTOCOL V1.2

monthly distribution

dfocoin is distributed every month for DFOcoin/ETH liquidity providers based on the total number of days providing liquidity multiplied by total dfocoins staked. Early stakers gets more distribution.

The quantity of the dfocoin distributed comes down every month to arrive at the total supply within 24 months as shown in the charts.

dfomainaccount

10% of the monthly distribution is supplied to the dfomainaccount

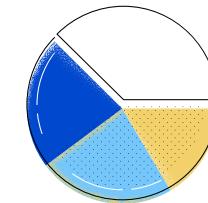

Road map

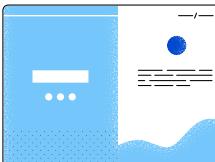

Q4 2020

MINIMUM VIABLE PRODUCT

Q1 2021

BD PROTOCOL LAUNCH

Q2 2021

AT LEAST 10 DFOCOINS

Q3 2021

AUTOMATED DFO PLATFORM
